for all your mining and construction
hydraulic attachment needs

RENEX
EQUIPMENT

renex.com.au

Increase Productivity of your machinery

Using the right attachment for the task is not only safer; it reduces downtime, lowers operating and lifetime ownership costs and, most importantly helps you reduce the cost per tonne of material moved.

With over 30 years of experience in hydraulic attachments we have selected only industry leading manufacturers allowing you to choose from a complete range of purpose-built tools for your next project.

Our experienced technicians rebuild, service and repair hydraulic attachments in all makes and models and are happy to provide you with professional technical advice when needed.

Renex are a CCF Systems Certified Contractor specialising in hydraulic attachments, fleet management, GPS tracking and fire suppression systems.

Contact us today and let us help you increase productivity of your machinery and safety of your operation.

OUR MISSION

“to market and provide solutions to enhance industry productivity”

Rammer Rockbreakers hit consistently harder

Constant and high breaking power is ensured with Rammer's sealed high pressure membrane accumulator system and patented Fixed Blow Energy operating principle ensures maximum impact energy regardless of the operating oil flow. This means that every impact – from first to last – is at maximum power, regardless of oil flow or frequency, reducing breaking time and maximising productivity.

Demolition Attachments with simplified maintenance

Features such as central pin adjustment to prevent jaw deviation, jaw design that allows crushed material to fall away from the cutting or crushing area, cutting blades that have four usable and reversible sides and tips that can be replaced without welding help you minimise maintenance and maintain high productivity levels during the whole task

Increased safety and productivity with Rammer Booms

With 40 years of experience Rammer is a leading supplier of hydraulic boom systems for the mining industry and quarries world-wide. Due to high volume production Rammer Booms are extremely economical compared to other boom systems on the market, and standard spare parts and tools are readily available globally.

Rammer has the right boom for every need. You can choose from 40 models, ranging from 1 tonne up to 18 tonne heavy duty models, with reaches from 1 metre up to 17 metres and our team of experienced professionals help you choose the right controls and powerpack to match the applications and rock breaker requirements.

PneuVibe
COMPACTION

PneuVibe - efficient compaction and simple to operate

From working in narrow trenches to large backfill operations, PneuVibe Compactor plates provide the most efficient means for vertical and inclined compaction.

PneuVibe compactor plate can be simply connected to your machine's existing hydraulics and with optional clamping devices you can also effectively combine sheet and perform pile driving.

Australian manufactured Jaws Buckets can be customised for your site specific application, maximising productivity and giving you a lower cost per tonne.

A wide range of Jaws ground engaging tools are available for all makes and models of machine in any application up to 61m³ in capacity.

GTS - the ultimate cutting machine

The Diamond Saw range is designed and manufactured in Australia offering more benefits and features than any other hydraulic saw:

- Lightweight, strong and robust design makes it easy to use
- Bi-directional blade rotation allows for cutting in both directions
- 180 degree rotating head bracket provides rotation without the need to disconnect, saving you time and money
- Instant brake system for added safety
- Offset extension to suit, ideal for boundary cutting
- No case drain line required, saving costs
- Built in water spray system keeps diamonds cool whilst minimising dust pollution
- Rotating shield helps to control water spray
- Heavy duty stand for storing and transport

Suit 1.5 to 40 tonne excavators, with cutting depths from 410mm to 950mm.

National Plastics & Rubber Safety Products

National Plastics & Rubber product range will help you increase safety onsite and in workshop.

All products are lightweight and Australian made:

- wheel chocks & brackets
- slip resistant step nosing
- workshop floor protection mats
- Mudflaps
- Dozer maintenance mats

Size 1.5LW
Lightweight wheel
chock in dual bracket
assembly

Size 4-3LW Light-
weight wheel chock
for workshops

NPR2122 - Dozer
maintenance mat

Increase Safety of your operation

Webb Air Prolec Machine Safety Control Systems

Rated Capacity Indicators and Controllers improve safety and efficiency of heavy plant when involved in lifting operations.

PME pro-safe range offers controls, monitors and alarms that no other system can match. Incorporating height, slew, minimum radius, lifting and dig depth controls and cab protection to improve safety and allowing excavator to achieve the maximum Safe Working Load for lifting over the entire working envelope of the machine, making it not only safer but significantly more productive.

Suitable for excavators, telehandlers, mobile cranes, truck mounted cranes and specialist equipment.

QMW Industries ROPS & FOPS

QMW specialise in certified safety products and services that not only save lives, but also improve operational efficiencies in the mining, oil and gas, construction, earthmoving, forestry, bulk handling, government and transport industries.

QMW differentiate themselves by designing and destructively testing all of their fully certified safety solutions, from truck, mining, construction, earthmoving and forestry equipment Roll Over Protective Structures (ROPS), Falling Object Protective Structures (FOPS) and Operator Protective Guards (OPG), to fully modular 4WD Personnel Carriers with integrated ROPS and Australian Design Rules (ADR) protection.

ETI Fire Suppression

A fire suppression system that can do it all - with one valve that can handle Rise Of Pressure ROP and / or Loss Of Pressure LOP at the same time you will have the advantages of fast fire detection using LOP and the robustness and reliability of ROP manual actuation.
